

# Hotspot Webphone

The Hotspot Webphone can be delivered as a fully managed service, including a hardware and software platform, installation and ongoing operations management. The service includes a 24x7 Network Operations Centre (NOC) that remotely monitors the device and proactively corrects any problems that may arise.

pieNETWORKS Hotspot Webphone allows you to:

- Provide cheap phone calls through VOIP
- Provide broadband internet access
- Provide Hotspot wireless access
- Provide Digital Media to advertisers
- Remotely manage your network of devices
- Extract detailed statistics and reports of usage

## What you get:

Feature	Benefit
Voice over IP	Cheap phone calls, fostering increased usage and higher return on your infrastructure investments
Prepaid card, credit card or coin access	Full flexibility to accommodate the various convenient payment options
Wireless Hotspot	Extra service and new revenue stream from users who can access the Internet using their laptops or PDAs
Digital Media Advertising	Attracting users to digital media advertising and specified content.
Branding	Opportunities for physical branding to improve association & visibility with customers
White list and black list filtering options	Avoid nasty surprises and incidences of users accessing inappropriate, offensive or sensitive material
Centralised monitoring	Centralised, remote monitoring of the service ensures rapid response to faults and ensures access policies are always up to date and maintained
Remote software upgrade	Keep your Webphone investment up to date with the latest feature enhancement and fixes
Online real-time reports	Secure web-based Management Information System; provides a series of usage and revenue reports to keep track of your investment
